

PRATHYUSHA KERTHI

Senior Informatica / Data Warehousing Engineer

☐ 9866808696

☐ prathyusha.kerthi@gmail.com

PROFESSIONAL SUMMARY

Senior Data Warehousing and ETL professional with 11+ years of strong hands-on experience in designing, developing, optimizing, and supporting large-scale Enterprise Data Warehouses and Data Marts using Informatica PowerCenter and Informatica Intelligent Cloud Services (IICS). Proven expertise across the complete data lifecycle including source analysis, data modeling, ETL architecture, performance tuning, production support, and cloud migration. Strong background in insurance, banking, retail, and pharmaceutical domains, with extensive exposure to high-volume, mission-critical data platforms. Additionally, over 1 year of hands-on experience in Databricks with Python for large-scale data processing, ETL development, and cloud-based data engineering solutions.

Demonstrated ability to work closely with **business stakeholders, data architects, and reporting teams**, translating complex business rules into scalable ETL solutions. Adept at mentoring junior developers, leading modules, and ensuring data quality, performance, and operational excellence in production environments.

CORE TECHNICAL SKILLS

Cloud / Big Data Platforms

- Azure Databricks
- Azure Synapse Analytics
- Snowflake

Programming Languages

- Python (Data Engineering, ETL, Data Processing)

ETL / Integration Tools

- Informatica PowerCenter (8.x, 9.x, 10.x)
- Informatica Intelligent Cloud Services (IICS)

Databases / Platforms

- Oracle (10g, 11g)
- SQL Server 2005+
- Netezza
- Teradata

Languages & Scripting

- SQL, PL/SQL
- UNIX Shell Scripting

Data Warehousing Concepts

- Dimensional Modeling (Star, Snowflake)
- Fact & Dimension Design
- Slowly Changing Dimensions (SCD Type I, II)
- OLTP to EDW migrations

Performance & Optimization

- ETL performance tuning (mappings, sessions, workflows)
- Indexing, partitioning, statistics analysis
- Lookup cache optimization (static, dynamic, persistent)

Operating Systems

- UNIX
- Microsoft Windows

KEY ACHIEVEMENTS

- ☐ **Chubb Excellence Award** – Received twice for exceptional delivery and production stability
- ★ Multiple **Client Appreciation Certificates** for flexibility, ownership, and high-quality deliverables
- ☐ Recognized for significant contributions to **Daiichi Sankyo – VIBE** program

PROFESSIONAL EXPERIENCE

CHUBB BUSINESS SERVICES INDIA PVT LTD

Senior Informatica Developer

Project: BAR – Business Analytical Repository

BAR is a centralized enterprise Data Mart serving as the **single source of truth** for Chubb and ACE post-merger. It supports complex analytical reporting such as **Premium & Loss Analysis, Renewal Retention, Expense Allocation, IBNR, Loss Triangles**, and ad-hoc business analytics.

Responsibilities:

- Designed and enhanced complex ETL mappings to support evolving business requirements across underwriting, claims, and finance domains
 - Played a key role in **Claim-to-Contract linkage**, **Reporting Current View**, and **Renewal Retention enhancements**
 - Led **migration from Informatica PowerCenter to Informatica IICS**, ensuring functional parity and performance benchmarks
 - Performed in-depth **root cause analysis** of production incidents and delivered permanent fixes within SLA
 - Tuned mappings and workflows for **high-volume batch processing** and improved runtime efficiency
 - Actively collaborated with **data architects, business analysts, and QA teams** during design and testing phases
 - Mentored new team members and created detailed **technical and process documentation**
- Over 1 year of hands-on experience in Databricks with Python for large-scale data processing and ETL workflows.
 - Developed and optimized Databricks notebooks and Python scripts to automate data loading, transformation, and validation processes.
 - Designed and implemented data pipelines to transfer data from Azure Synapse Analytics to Snowflake, ensuring data integrity and performance efficiency.
 - Implemented data warehousing techniques including Slowly Changing Dimensions (SCD Type I & II), incremental loads, and full data loads to manage evolving datasets.
 - Collaborated with cross-functional teams to streamline cloud data workflows and improve data quality and reliability.
 - Managed code promotion across **DEV, SIT, UAT, and PROD** environments
-

SYNECHRON TECHNOLOGIES PVT LTD

Lead Engineer – Informatica

Duration: 1.9 Years

Project: Data Quality Solutions (DQS)

Client: Wells Fargo

DQS ensures enterprise-wide **data quality standards** across multiple Lines of Business by validating data from various Systems of Record through centralized quality rules.

Responsibilities:

- Developed ETL mappings to identify and load **bad-quality data** based on integrity, completeness, uniqueness, accuracy, timeliness, and validity rules
 - Leveraged advanced Oracle features such as **Analytical Functions, Table Functions, Indexes, Partitioning, and Materialized Views**
 - Performed **unit testing, UAT support**, and validation of data quality outputs
 - Managed end-to-end **code migration and deployment** across environments
 - Ensured job reliability and stability in production with proactive monitoring
 - Coordinated closely with architects and business analysts to align technical implementation with governance standards
-

COGNIZANT TECHNOLOGY SOLUTIONS

Informatica Developer

Project: Dunkin' Brands

Responsibilities:

- Translated business requirements into scalable ETL designs for enterprise reporting
- Built complex Informatica mappings using **Expression, Aggregator, Lookup, Joiner, Update Strategy, Sequence Generator, XML Source Qualifier**
- Implemented **SCD Type I & II** handling for dimension tables
- Optimized performance through cache tuning, indexing strategies, and workflow parallelism
- Led unit testing and performance testing using Informatica Debugger and SQL scripts
- Coordinated deployments and supported production batches

Environment: Informatica PowerCenter 9.x, Oracle 10g, SQL Server 2005

Project: Wyndham

Responsibilities:

- Designed and implemented **Fact and Dimension tables** using Star Schema
 - Created logical and physical data models
 - Developed end-to-end ETL flows from flat files and Oracle sources
 - Extensively worked on **PL/SQL development, SQL tuning, and database object creation**
-

Project: Bayer Healthcare Pharmaceuticals

Responsibilities:

- Architected multi-layer ETL flows (Source → Stage → IDS → ADS)
- Built reusable mapplets and transformations to standardize logic
- Developed workflows with advanced control logic (Command, Decision, Event Wait)
- Tuned ETL and database layers for optimal performance
- Acted as primary **production support resource**, handling critical outages

Environment: Informatica PowerCenter 8.6, Teradata, UNIX

Project: AstraZeneca Pharmaceuticals LP

Responsibilities:

- Designed dimensional models and ETL pipelines for pharmaceutical analytics
- Implemented complex transformations and reusable components
- Optimized SQL queries and database structures for performance

Environment: Informatica PowerCenter 8.6, Netezza

Project: Daiichi Sankyo – VIBE

Responsibilities:

- Developed enterprise ETL workflows for OLTP to EDW migration
 - Managed repositories, folders, users, and deployment groups
 - Implemented performance tuning and caching strategies
 - Supported enterprise scheduling using **Tidal Scheduler**
-

EDUCATION

Bachelor of Engineering – Information Technology

Mahatma Gandhi Institute of Technology (MGIT), 2010

Intermediate (IPE) – Kakatiya Junior College, 2006

SSC – Nirmala Hrudaya Girls High School

ADDITIONAL STRENGTHS

- Strong analytical and problem-solving skills

- Excellent communication with technical and non-technical stakeholders
- Proven ability to handle **large-scale production systems**
- Quick learner with adaptability to new tools and technologies
