

SUMMARY Computer Science graduate with solid Python and ML skills, one internship in a data-adjacent role, and two well-executed academic projects. Comfortable with EDA and model building; looking to deepen expertise in production ML and financial analytics.

EDUCATION B.Tech – Computer Science BITS Pilani, Hyderabad Campus | CGPA 8.1 | Expected May 2024

TECHNICAL SKILLS Python: pandas, NumPy, scikit-learn, Matplotlib, seaborn SQL: MySQL, joins, aggregations, subqueries ML: Logistic Regression, Random Forest, KMeans, basic model evaluation Tools: Jupyter Notebook, Git/GitHub, Power BI (basic) Exposure: NLTK (one project), no production deployment experience

EXPERIENCE Data Analyst Intern – HDFC Ergo (Mumbai, May–Jul 2023, 2 months)

- Pulled and cleaned insurance claims data from MySQL (50K+ rows)
- Built summary dashboards in Power BI for the operations team
- Identified a data quality issue in the claims pipeline; flagged it to the engineering team
- Did not build predictive models; role was primarily reporting and EDA

PROJECTS

1. Credit Card Fraud Detection – Trained Random Forest on imbalanced dataset; used SMOTE for oversampling – Evaluated with precision (0.81), recall (0.76), F1 (0.78) – No AUC-ROC computed; deployed locally via a Jupyter notebook only
2. Twitter Sentiment Analysis (NLP) – Used NLTK + TF-IDF + Logistic Regression; 74% accuracy on test set – No fine-tuned transformers; kept to classical NLP methods
3. Sales Forecasting – Retail Dataset (Kaggle) – Applied ARIMA model; did not experiment with LSTM or hybrid approaches – RMSE improvement over naive baseline: ~9%

COURSES & CERTIFICATIONS

- Applied Machine Learning – Coursera (Stanford, completed)
- SQL for Data Science – UC Davis / Coursera (completed)
- Deep Learning Specialization – in progress (2/5 courses done)

ACHIEVEMENTS

- Shortlisted (top 15%) in a national data hackathon; did not place
- BITS academic merit scholarship recipient
